CLAIMS

We claim:

1. A method for navigating in a vehicle comprising the steps of:

    identifying navigation information for at least one destination;

    storing said navigation information in at least a first memory remote from said

    vehicle;

    transferring said navigation information from said first memory to a navigation

    device in said vehicle; and,

    navigating said vehicle to said destination using said navigation device and said

    navigation information.

2. The method for claim 1, wherein said navigation information comprises location

    data.

3. The method of claim 2, wherein said location data comprises GPS coordinates.

4. The method of claim 1, wherein said identifying step is performed in a personal

    computer.

5. The method of claim 1, wherein said identifying step is performed in a handheld

    computer.

1   6.   The method of claim 1, wherein said identifying step is performed in a Web site.

1   7.   The method of claim 1, wherein said identifying step is performed using

2   navigation information system.

1   8.   The method of claim 1, wherein said location data is stored on a portable storage

media, said portable storage media being transferred to said vehicle to transfer said

navigation information to said navigation device in said vehicle.

9.   The method of claim 1, wherein said memory is connected to a network, said

navigation device being wirelessly connectible to said network for receiving said

navigation information from said network.

10.   The method of claim 1, wherein said location data is placed into a queue, said

navigation information being removed from said queue when said navigation device is

3   connected to said network.

1   11.   The method of claim 1, further comprising the step of converting said navigation

2   information to a format recognizable to said navigation device.
